## **Philippine History: Facts and Figures**

Children with Low conduct problems were more likely to cooperate than children with High conduct problems after mutual defection, although this difference was not significant. However, when children had defected and the partner had cooperated in the prior round child D, partner C children with Low conduct problems were marginally more likely to cooperate. Thus, children who scored in the abnormal range for conduct problems High were less likely to try to re-establish cooperation after they themselves had defected.
